

IBM® DOORS® Migration Solutions

Jama Connect® is a modern requirements management alternative to IBM DOORS with migration options scaled to meet the different needs of our customers.

Today's product development organizations must move fast without sacrificing quality. To meet this challenge, organizations require best-in-class software to scale development, save time, and ensure compliance to quality and safety regulations.

As organizations make the transition from legacy requirements management to a more modern solution, the process of migration does not have to be daunting.

Jama Software provides DOORS Migration Solutions to scale and meet the unique needs of every customer.

Switching from IBM DOORS to Jama Connect requires a migration approach that scales to your people, process, and data. It's not just about migrating the data from one database to another; onboarding and training teams on the new solution is also a critical component to long-term success.

FLEXIBLE, SCALABLE MIGRATION SOLUTIONS

Jama Software consultants work with you to adapt Jama Connect to fit your product development process, identify and migrate required data, and train your teams for rapid adoption.

PHASE 1 **Planning**

Our consultants work with you to assess and determine a strategy for both your team members' and data to move into Jama Connect from IBM DOORS. This involves defining the deployment schedule, training plan, and an analysis of the data to be migrated for each team or program.

PHASE 2 **Alignment**

A key step in the process is to align Jama Connect capabilities with your desired product development process, team workflows and reporting needs. Our consultants will work with you to configure Jama Connect guided by how you want to work and practices gained from working with hundreds of similar customers.

PHASE 3 **Data Migration**

We provide data migration tools and solutions which scale to the volume and complexity of your data. Our consultants will provide guidance using these tools or can perform the data migration on your behalf.

PHASE 4 **Launch**

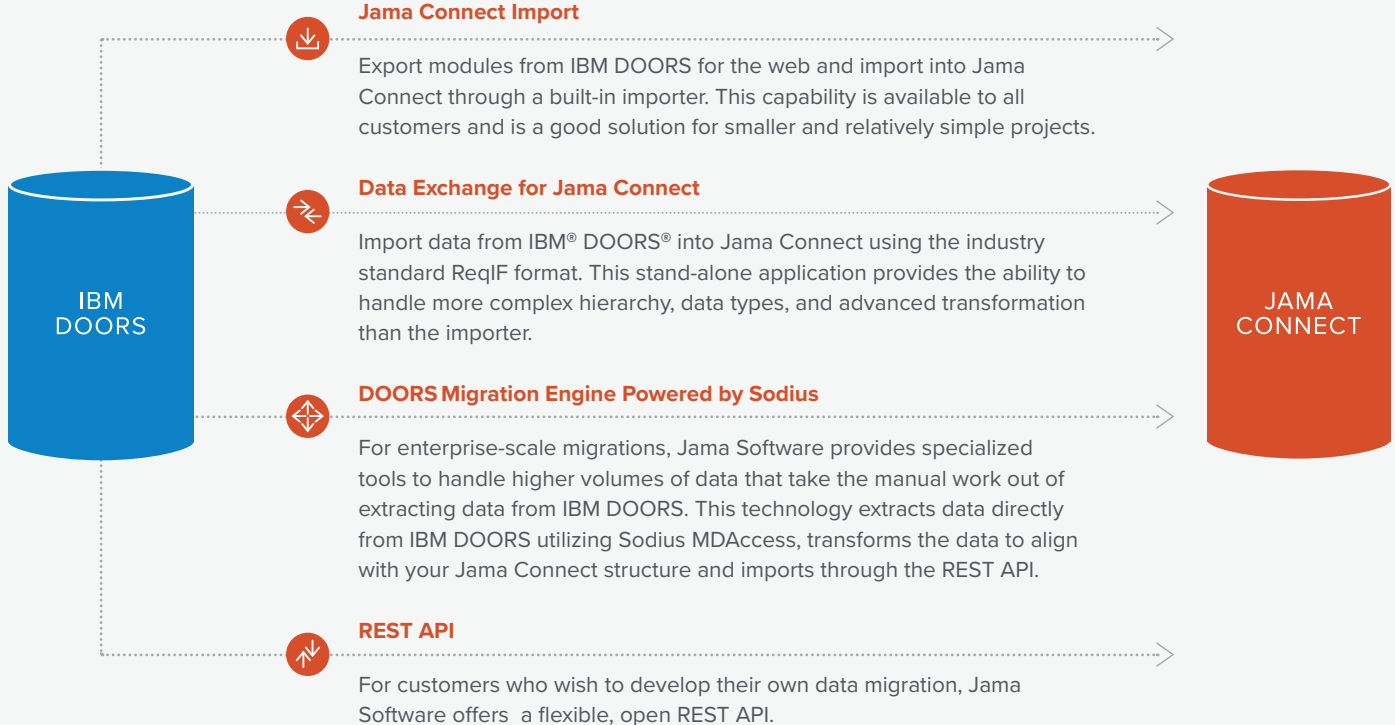

After implementation is complete and the necessary data is loaded into Jama Connect, end-user training and coaching is launched. Our consultants are available to perform end-user training or train your teams on how to manage the deployment.

Jama Software consultants work with you to adapt Jama Connect to fit your product development process, identify and migrate required data, and train your teams to rapidly adopt Jama Connect.

Jama's DOORS Migration Solutions are both scalable and flexible enough to meet the unique needs of just about any organization. These solutions are available in both cloud and self-hosted deployment models. Our Jama Professional Services team is available to work with you to determine the right migration approach.

Whether you select the cloud or self-hosted deployment model, Jama Software provides a framework that supports a flexible approach to manage both cost and risk of the transition from IBM DOORS to Jama Connect. The goal of the migration process is to leverage IBM DOORS' requirements information, while positioning new and migrated data to take advantage of a modern approach to requirements management with Jama Connect.

Data Migration Options

Jama Software® is focused on maximizing innovation success in multidisciplinary engineering organizations. Numerous firsts for humanity in fields such as fuel cells, electrification, space, software-defined vehicles, surgical robotics, and more all rely on Jama Connect® requirements management software to minimize the risk of defects, rework, cost overruns, and recalls. Using Jama Connect, engineering organizations can now intelligently manage the development process by leveraging Live Traceability™ across best-of-breed tools to measurably improve outcomes. Our rapidly growing customer base spans the automotive, medical device, life sciences, semiconductor, aerospace & defense, industrial manufacturing, consumer electronics, financial services, and insurance industries.
