jama connect®
Enabling Collaboration for Software Teams

Provide real-time collaboration across development teams to accelerate time to market

Solution Overview

Jama Connect® is a solution for managing software and product requirements from idea through development, launch, and iteration. It brings people and data together in one place, providing visibility and actionable insights into the product development lifecycle. Jama Connect equips teams to analyze impacts, track decisions, and ensure quality of the product you set out to build.

Simplify Complex Software Development With Jama Connect

Jama Connect is a hub for understanding your complete software development lifecycle, enabling program managers, business analysts, and engineers to track requirements, decisions, and relationships on multiple levels to deliver compliant, market-driven products effectively.

Jama Connect helps teams deliver high-quality products on time and on budget by aligning stakeholders, identifying risks early on, and visualizing connections between regulations, requirements, and test cases throughout the development process.

With robust integrations across the value chain, Jama Connect allows for software teams to work in the tools desired. The flexible integrations are included through a Restful API, integration hub providers (Tasktop and OpsHub), as well as through native integrations that support tools across the software development lifecycle.

Jama Connect aligns to frameworks that support Agile, SAFe and traditional waterfall methodologies to provide the flexibility to support teams aligned to their processes of choice.

INCLUDES

Live Traceability
view items, understand their status, and take immediate action to close gaps.

Regulatory Reporting
Includes reports for system requirements specification (SRS) documents and other requirements management tasks.

Test Management
Give your quality assurance (QA) teams the ability to create and organize test plans, test cases, dashboards, and reports so they can manage testing easily—in real time.
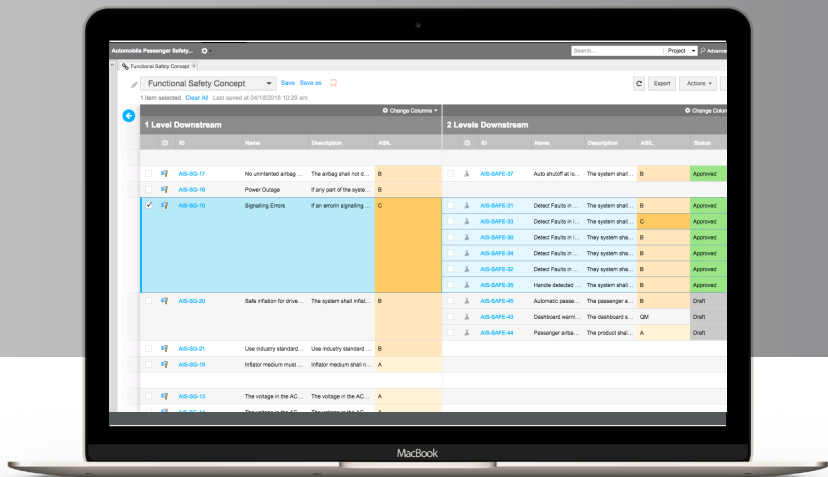

Reviews and Approvals
Simplify the process by capturing feedback from stakeholders, including voting for priority and electronic signatures for approvals. *Unlimited stakeholder licenses* allows the sharing of requirements among teams, both inside and outside of the organization.

Requirements in a single system of record
Achieve and maintain alignment with real-time updates across hardware and software teams in a single location.

Flexible Deployment Models
Available in cloud SaaS and onpremises.

Key Benefits

Confidence

Trace requirements throughout the development process, illuminate risk, and proceed with confidence that you are building what you set out to build.

Visibility

Enable complete visibility into the product development process by monitoring relationships and dependencies between systems, teams, activities, and results.

Speed

Align teams, track decisions efficiently, and minimize rework to create high-quality products on time and on budget.

Adaptability

Easily adapt Jama Connect to your project and organizational workflows to create an intuitive experience so your teams can get up to speed quickly

Performance

Benchmark and monitor team performance over time to understand the benefits of retooling your product development process. Store and reuse existing intellectual property and best practices from multiple product lines.

Using Jama Connect to manage requirements, risk, and test cases helps teams improve how they build missioncritical software and complex systems. With Jama Connect, teams can maintain visibility, alignment, traceability, and effective change management throughout the development lifecycle. Product teams can also maintain critical information about their product requirements and test cases and directly connect them to development activities in Jira, including sprint planning, task management, estimations, and defect and issue tracking.
