

## Jama connect® Datatap

### Accelerate Project Data Reporting and Storage Compliance with Jama Connect Datatap™

Organizations often face significant challenges when managing and reporting vast amounts of data, especially in industries with rigorous regulatory requirements and high process complexity. These challenges include difficulties in maintaining consistent traceability, ensuring compliance across projects, and handling inefficiencies caused by manual or fragmented processes. The ability to provide metrics over time requires a steady stream of data to feed trending, burndown, and other reports. Reliance on manual data extraction may lead to slow updates for internal reporting dashboards and business user access before they can explore and analyze data.

Jama Connect Datatap™, powered by Jama Connect Interchange™, addresses these challenges by providing a simple, efficient way to access your data in bulk. Jama Connect Datatap delivers a daily, comprehensive export of your Jama Connect cloud data directly to a secure SFTP server. This reliable, consistent process allows your teams to feed information into their preferred business intelligence tools like Power BI or Tableau without making high-volume API calls.

#### KEY BENEFITS

##### Accelerate Reporting

Replace manual API calls with an automated daily data export for fast, reliable access to the data you need to build insightful reports and dashboards.

##### Empower Business Users

Give your teams the freedom to explore data, slice and dice it as needed, and uncover critical insights without waiting for custom reports to be developed.

##### Enhance Data Integration

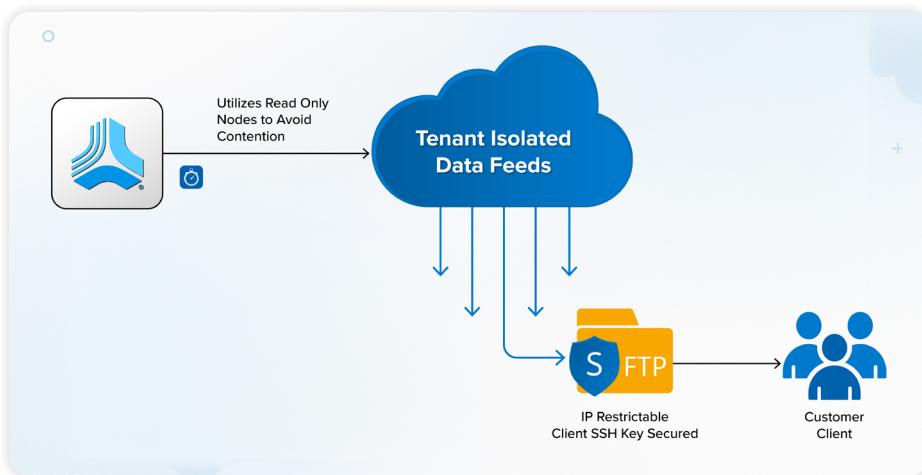

Easily combine your Jama Connect data with other internal data sources to create a unified view of project information, identify risks earlier, and track key performance metrics more effectively.

##### Simplify Data Storage Compliance

Create a reliable, consistent process for backups to comply with long-term storage regulatory or corporate requirements.

## How Jama Connect Datatap Works

Jama Connect Datatap, administered through a Jama Connect Interchange instance, simplifies data access by performing a nightly, comprehensive export of all your projects, items, and relationships to a secure SFTP server. This export mirrors the REST API schema, ensuring consistency and seamless integration with your existing workflows. Your teams can then pull this data into preferred business intelligence tools like Power BI or Tableau, which accelerates reporting and empowers users to explore information. Ultimately, this process makes it easier to combine Jama Connect cloud data with other internal sources, creating unified dashboards for earlier risk identification and a holistic view of project health. Daily exported data can be easily added to your long-term data storage to satisfy any applicable regulatory or corporate requirements.

Jama Connect Datatap provides a secure, structured, and reliable data export solution that enables effective integration with analytics tools, enhancing reporting capabilities, streamlining decision-making, and serving long term data storage processes.

### Jama Connect Adheres to the Following Protocols

Built on Jama Software's Secure and Scalable Cloud Platform

Suitably validated by  
TÜV SÜD

Jama Connect is SOC2 Type 2 certified  
in both the server and application

Ensures strong privacy  
management practices

Data transferred is secured  
and encrypted

To learn more about how Jama Software can address your organization's challenges and optimize your development workflows, visit [www.jamasoftware.com](http://www.jamasoftware.com)

Jama Software® is focused on maximizing innovation success in multidisciplinary engineering organizations. Numerous firsts for humanity in fields such as fuel cells, electrification, space, software-defined vehicles, surgical robotics, and more all rely on Jama Connect® requirements management software to minimize the risk of defects, rework, cost overruns, and recalls. Using Jama Connect, engineering organizations can now intelligently manage the development process by leveraging Live Traceability™ across best-of-breed tools to measurably improve outcomes. Our rapidly growing customer base spans the automotive, medical device, life sciences, semiconductor, aerospace & defense, industrial manufacturing, consumer electronics, financial services, and insurance industries.
